1	CLAIMS
---	--------

_	** **		1 .
2	What is	s clain	ned is:

A method of channel selection for a mobile station comprising:

4 determining a position of said mobile station;

5 periodically performing channel quality measurements of signals transmitted from

one or more base stations, wherein a frequency of performing said channel quality

7 measurements is a function of said position of said mobile station.

ر 8

2. The channel selection method of claim 1 wherein said frequency of performing said channel quality measurements is a function of the relative position of said mobile station with respect to a first base station serving said mobile station.

12

13

14

15

16

11

3. The channel selection method of claim 1 wherein said frequency of performing said channel quality measurements is a function of the relative position of said mobile station with respect to a first base station serving said mobile station and at least one additional base station.

17

18

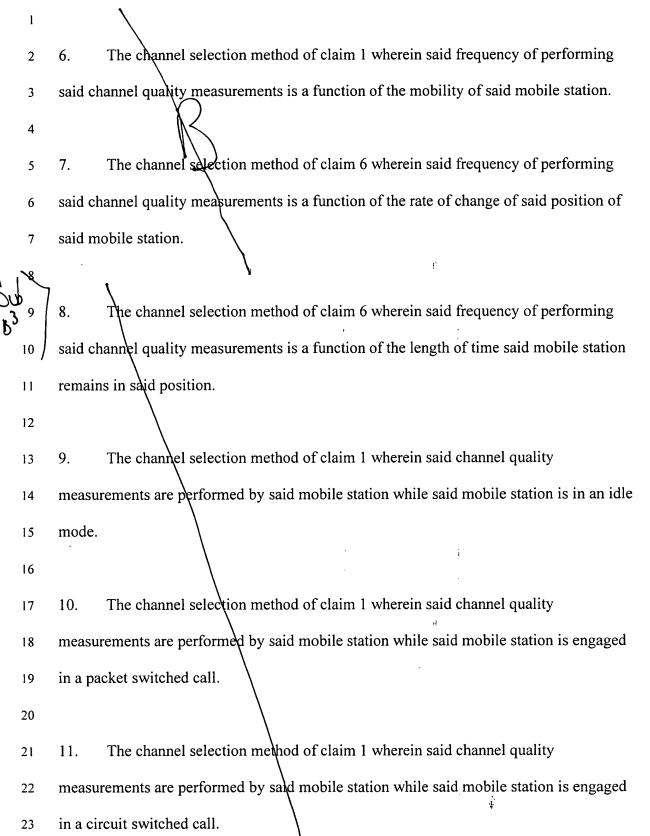

19

4. The channel selection method of claims wherein said position of said at least one additional base station is transmitted to said mobile station by said first base station.

20

5. The channel selection method of claim 7 wherein said position of said at least one additional base station is included in a neighbor list transmitted to said mobile station by said first base station.

23

1	
2	12. The channel selection method of claim 1 wherein said mobile station uses said
3	channel quality measurement for cell reselection.
4	
5	13. The channel selection method of claim 1 further including transmitting said
6	channel quality measurements from said mobile station to a first base station serving said
7	mobile station.
8	1
9	14. The channel selection method of claim 13 further including making hand-off
10	determinations at said first base station based on said channel quality measurements.
11	
12	
13	15. A method of determining the position of a mobile station comprising:
14	determining a position of said mobile station at a first time instant; and
15	updating said position periodically, wherein a frequency of said updating is a
16	function of said position of said mobile station.
17	
18	16. The method of claim 15 wherein said frequency of updating said position is a
19	function of the relative position of said mobile station with respect to a first base station
20	serving said mobile station.

- The method of claim 15 wherein said frequency of updating said position is a ì 17. function of the relative position of said mobile station with respect to a first base station 2 serving said mobile station and at least one of said additional base station. 3 4 18. The channel selection method of claim 17 wherein the position of said at least one 5 additional base station is transmitted to said mobile station by said first base station. 6 7 19. The method of claim 18 wherein said position of said at least one additional base 8 station is included in a neighbor list transmitted to said mobile station by said first base 9 10 station. 11 20. The method of claim 15 wherein said frequency of updating said position is a 12 function of the mobility of said mobile station. 13 14 The method of claim 20 wherein said frequency of updating said position is a 21. 15 function the rate of change of said position of said mobile station. 16 17 The channel selection method of claim 20 wherein said frequency of updating 22. 18 said position is a function of the length of time said mobile station remains in said 19 position. 20
- 22 23. The method of claim 15 wherein said updating is performed by said mobile station while said mobile station is in an idle mode.

•		· <b>/</b>
2	24.	The method of claim 15 wherein said updating is performed by said mobile
3	station	while said mobile station is engaged in a packet switched call.
4		
5	25.	The method of claim 15 wherein said updating is performed by said mobile
6	station	while said mobile station is engaged in a circuit switched call.
7		
8	26.	The method of claim 15 further including transmitting position information from
9	said m	obile station to said base station.
10		
11		
12	21.	A method for channel selection by a mobile station comprising:
13		serving said mobile station with a first base station;
14		generating a list of neighboring base stations and corresponding positions for each
15		said neighboring base stations; and
16		transmitting said at least one list of neighboring base stations and corresponding
17		positions for each of said neighboring base stations to said mobile station.
18		
19	28.	The method of claim 27 wherein said step of transmitting said list of neighboring
20	base s	tations and corresponding positions for each of the neighboring base stations is
21	transm	itted on a broadcast channel.

1	29.	The method of claim 27 wherein said step of transmitting said list of neighboring
2	base	stations and corresponding positions for each of the neighboring base stations is
3	transı	mitted on a point-to-point channel.
4		
5	30.	The method of claim 27 including wherein said list includes a plurality of area
6	defin	itions, and wherein said neighboring base stations in said list are associated with at
7	least	one of said area definitions in said list.
8		\ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \
9	31.	A mobile station comprising:
10		a transceiver transmitting and receiving radio frequency signals;
11		a signal processor operatively connected to said transceiver, said signal processor
12		periodically performing channel quality measurements on selected signals
13		received by said transceiver;
14		control logic controlling said signal processor and said transceiver to vary the
15		frequency of performing said channel quality measurements as a function of
16		the position of said mobile station.
17	1	<b>,</b>
17 518 18	1 32.	The mobile station of claim 31 wherein said control logic varies the frequency of
19		rming said channel quality measurements based on the relative position of said
20	mobi	le station with respect to a first base station serving said mobile station.
21		
22	33.	The mobile station of claim 31 wherein said control logic varies the frequency of

performing said channel quality measurements based on the relative position of said

1	mobile station with respect to a first base station serving said mobile station and at least
2	one additional base station.
3	
4	34. The mobile station of claim 31 wherein said control logic varies the frequency of
5	performing said channel quality measurements based on the mobility of said mobile
6	station.
7	
8	35. The mobile station of claim 34 wherein said control logic varies the frequency of
9	performing said changel quality measurements based on the rate of change of said
10	position of said mobile station.
11	
12	36. The mobile station of claim 34 wherein said control logic varies the frequency of
13	performing said channel quality measurements based on the length of time said mobile
14	station remains in said position.
15	
16	37. The mobile station of claim 31 further including a positioning receiver for
17	determining the position of said mobile station.
18	
19	38. A mobile station comprising:
20	a transceiver transmitting and receiving radio frequency signals;
21	a positioning receiver periodically determining a position of said mobile station;

1	control logic controlling said transceiver and said positioning receiver, wherein
2	said control logic varies the frequency of determining said position of said
3	mobile station as a function of said position.
4	39. The mobile station of claim 38 wherein said control logic varies the frequency of
5	determining said position of said mobile station based on the relative position of said
6	mobile station with respect to a first base station serving said mobile station.
7	
8	40. The mobile station of claim 38 wherein said control logic varies the frequency of
9	determining said position of said probile station based on the relative position of said
10	mobile station with respect to a first base station serving said mobile station and at least
11	one additional base station.
12	
13	41. The mobile station of claim 38 wherein said control logic varies the frequency of
14	determining said position of said mobile station based on the mobility of said mobile
15	station.
16	
17	42. The mobile station of claim 38 wherein said control logic varies the frequency of
18	determining said position of said mobile station based on the rate of change of said
19	position of said mobile station.
20	
21	43. The mobile station of claim 38 wherein said control logic varies the frequency of
22	determining said position of said mobile station based on the length of time said mobile

station remains in said position.

2	44.	A method of controlling a mobile station comprising:
3	•	determining a position of said mobile station; and
,		
4		performing arperiodic task, wherein a frequency of performing said

function of said position of said mobile station.

5

1

The control method of claim 44 wherein said frequency of performing said 45. periodic task is a function of the relative position of said mobile station with respect to a first base station serving said mobile station.

task is a

10

The control method of claim 44 wherein said frequency of performing said periodic task is a function of the relative position of said mobile station with respect to a first base station serving said mobile station and at least one additional base station.

14

The control method of claim 44 wherein said frequency of performing said 47. periodic task is a function of the mobility of said mobile station.

18

19

23

in said frequency of performing said The control method of claim 47 where 48. periodic task is a function the rate of change of said position of said mobile station.

- The control method of claim 47 wherein said frequency of performing said 49. channel quality measurements is a function of the length of time said mobile station remains in said position.
